/lab host="XL1-blue MRF"
/clon=lib="Ebrafish ICRFzfls"
/clon=strand cloud was primed with a Not I - oligo(dT)15 primer
[5.pdACTAGTTCARGATGGGAGGCCCTTTTTTTTTTTTTTTT], on
mRNA from pooled 26 somite zebrafish embryos;
double-stranded cDNA was ligated to Sal I adaptors (BRL),
digested with Not I and cloud into the Not I and Sal I
sites of the pSPOTT vector (BRL). Library was constructed
by Matthew Clark (Lehrach lab; ICRF, London and Max
Planck Institut fuer Molekulare Genetik, Berlin) and was
not biochemically normalised. 70,000 cloues from this
library were arrayed on high density filters and
subsequently screened by oligomucleotide hybridization
fingerprinting to identify unique or minimally redundant
clones for more intensive analysis."

double-stranded cDNA was ligated to Sal I adaptors (BRL), digested with Not I and cloned into the Not I and Sal I sites of the pSPORT1 vector (BRL). Library was constructed by Matthew Clark (Lehrach lab; ICRF, London and Max Planck Institut fuer Molekulare Genetik, Berlin). CDNAs for BST analysis were selected following oligonucleotide hybridization fingerprinting of arrayed clones from zebrafish late somitogenesis (26 ss), adult liver or embryonic shield stage (5.6 h) libraries. Fingerprint data were used to computationally cluster CDNAs, and a single CDNA from each cluster was chosen for sequencing In some cases multiple members of the same cluster were sequenced to assess clustering parameters or single clones were sequenced additional times to assess quality
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Actinopterygii; Neopterygii; Teleostei; Ostariophysi; Cypriniformes; Cyprinidae; Danio.

Novel isolated 16S rDNA Helicobacter polynucleotides useful as probes primers for detecting and/or typing Helicobacter strains present in a biological sample.

Claim 2; Page 24-25; 132pp; English.

This sequence represents a Helicobacter 16STRNA sequence of the invention. A probe which specifically hybridises to the 16STRNA sequence and a primer which specifically maplifies it are used for detecting and/or typing Helicobacter Strains present in a biological sample (botained from mammals preferably cattle and pigs) by hybridishing or specifically amplifying the 16S TRNA gene target region of Helicobacter strains present in the biological sample with the primer or probe, strains present in the sological sample with the primer or probe, respectively. The 16S TRNA sequence is also used as a medicament. The 16S TRNA sequence is also used as a medicament. The 16S TRNA sequence is also used as a medicament the 16S TRNA sequences are used for studying and detecting pathogenic

A probe which specifically hybridises to the 16SrRNA sequence and a primer which specifically amplifies it are used for detecting and/or typing Helicobacter strains present in a biological sample (obtained from mammals preferably cattle and pigs) by hybridising or specifically amplifying the 16S rRNA gene target region of Helicobacter strains present in the biological sample with the primer or probe, respectively. The 16S rRNA sequence is also used as a medicament. The 16S rRNA sequence is also used as a medicament. The 16S Helicobacter strains which cause gastric ulcers and chronic gastritis in mammals, particularly cattle and pigs. The method is also useful for detection of zoonoses in humans. ```
invention. A probe which specifically hybridises to the 16SrRNA sequence and a primer which specifically amplifies it are used for detecting and/or typing Helicobacter strains present in a blological sample (obtained from mammals preferably cattle and pigs) by hybridising or specifically amplifying the 16S rRNA gene target region of Helicobacter strains present in the blological sample with the primer or probe, respectively. The 16S rRNA sequence is also used as a medicament. The 16S rRNA sequences are used for studying and detecting patchogenic Helicobacter strains which cause gastric ulcers and chronic gastritis in mammals, particularly cattle and pigs. The method is also useful for detection of zoonoses in humans. (Updated on 15-SEP-2003 to standardise OS field)

```
This sequence represents a Helicobacter 16SrRNA sequence of the invention. A probe which specifically hybridises to the 16SrRNA sequence and a primer which specifically maplifies it are used for detecting and/or typing Helicobacter strains present in a biological sample (obtained from mammals preferably cattle and pigs) by hybridising or specifically amplifying the 16S rRNA gene target region of Helicobacter strains present in the biological sample with the primer or probe respectively. The 16S rRNA sequence is also used as a medicament. The 16S rRNA sequence is also used as a medicament. The 16S rRNA sequence is also used as an edicament. The 16S rRNA sequence is also used as an edicament, the 16S rRNA sequence is also used as an edicament, or an entity and detecting pathogenic mammals, particularly cattle and pigs. The method is also useful for detection of zoonoses in humans. (Updated on 15-SEP-2003 to standardise
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel isolated 16S rDNA Helicobacter polynucleotides useful as probes or primers for detecting and/or typing Helicobacter strains present in a biological sample.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 invention. A probe which specifically hybridises to the 168rRNA sequence and a primer which specifically amplifies it are used for detecting and/or typing Helicobacter strains present in a biological sample (obtained from mammals preferably cattle and pigs) by hybridising or specifically amplifying the 168 rRNA gene target region of Helicobacter strains present in the biological sample with the primer or probe, respectively. The 168 rRNA sequence is also used as a medicament. The 168 rRNA sequence is also used as a medicament. The 168 Helicobacter strains which cause gastric ulcers and chronic gastritis in mammals, particularly cattle and pigs. The method is also useful for detection of zoonoses in humans.                                                                                                                                                                                                                                                                       ઠ
                                                                                                                                                                                                                                                                                                 ö
                                    This sequence represents a Helicobacter 168rRNA sequence of the invention. A probe which specifically hybridises to the 168rRNA sequence and a primer which specifically amplifies it are used for detecting and/or typing Helicobacter strains present in a biological sample (obtained from mammals preferably cattle and pigs) by hybridising or specifically amplifying the 168 rRNA gene target region of Helicobacter strains present in the biological sample with the primer or probe respectively. The 168 rRNA sequence is also used as a medicament. The 168 rRNA sequence is also used as a medicament. The 168 rRNA sequence is also used as a medicament. The 168 Helicobacter strains which cause gastric ulcers and chronic gastritis in mammals, particularly cattle and pigs. The method is also useful for detection of zoonoses in humans.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence represents a Helicobacter 16SrRNA sequence of the invention. A probe which specifically hybridises to the 16SrRNA sequence and a primer which specifically amplifies it are used for detecting and/or typing Helicobacter strains present in a biological sample (obtained from mammals preferably cattle and pigs) by hybridising or specifically amplifying the 16S rRNA gene target region of Helicobacter strains present in the biological sample with the primer or probe, respectively. The 16S rRNA sequence is also used as a medicament. The 16S rRNA sequences are used for studying and detecting pathogenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel isolated 16S rDNA Helicobacter polynucleotides useful as probes or primers for detecting and/or typing Helicobacter strains present in a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence represents a gene coding Chlamydia 16s ribosome RNA from Chlamydia pecorum. Also described in the present invention are: (1) a recombinant vector containing the above gene; and (2) a transformant transformed by the above recombinant vector. The nucleic acid, and primers which can hybridise to it, are used for the specific nucleic acid amplification detection of a Chlamydia genus microbe i.e. detection of PCR products. (Updated on 17-OCT-2003 to standardise OS field)
Helicobacter strains which cause gastric ulcers and chronic gastritis in mammals, particularly cattle and pigs. The method is also useful for detection of zoonoses in humans. (Updated on 15-SBP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      - used for

```
The present sequence represents a gene coding Chlamydia 16s ribosome RNA from Chlamydia psittaci. Also described in the present invention are: (1) a recombinant vector containing the above gene; and (2) a transformant transformed by the above recombinant vector. The nucleic acid, and primers which can hybridise to it, are used for the specific nucleic acid amplification detection of a Chlamydia genus microbe i.e. detection of PCR products. (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents a gene coding Chlamydia 16s ribosome RNA from Chlamydia psittaci.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents a gene coding Chlamydia 16s ribosome RNA from Chlamydia psittaci. Also described in the present invention are: (1) a recombinant vector containing the above gene, and (2) a transformant transformed by the above recombinant vector. The nucleic acid, and primers which can hybridise to it, are used for the specific nucleic acid amplification detection of a Chlamydia genus microbe i.e. detection of PCR products. ```
The present sequence represents a gene coding Chlamydia 16s ribosome RNA area Campaida psiteaci. Also described in the present invention are: (1) a recombinant vector containing the above gene; and (2) a transformant transformed by the above recombinant vector. The nucleic acid, and primers which can hybridise to it, are used for the specific nucleic acid amplification detection of a Chlamydia genus microbe i.e. detection of PCR products. (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antisense, bacterial 16s ribosomal RNA, rRNA, bacterial infection, human, food grain supplement, livestock; poultry, therapeutic, ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Antibacterial compound, useful for treating bacterial infections and as livestock and poultry food supplement, comprises antisense oligonucleotides complementary to bacterial 16S and 23S rRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAS11021-AAS11034 represent the coding sequences of bacterial 16s ribosomal RNA (rRNA) genes. The sequences were used to design anti-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a gene coding Chlamydia 16s ribosome RNA from Chlamydia trachomatis. Also described in the present invention are:
(1) a recombinant vector containing the above gene; and (2) a transformed by the above recombinant vector. The nucleic acid, and primers which can hybridise to it, are used for the specific nucleic acid amplification detection of a Chlamydia genus microbe i.e. detection of PCR products

oligomers containing 8-40 nucleotide subunits, including a targeting nucleic acid sequence at least 10 nucleotides in length which is nucleic acid sequence at least 10 nucleotides in length which is complementary to a bacterial 168 or 235 FWAM nucleic acid sequence. The antisense oligomers are used for treating a bacterial infection in a human or a mammalian animal produced by Escherichia coli, Salmonella typhimurium, Pseudomonas aeruginosa, Vibrio cholera, Neisseria gonorrhoea, Helicobacter pylori, Bartonella henselae, Haemophilus influenza, Shigella dysenterae, Staphylococcus aureus, Mycobacterium tuberculosis, Streptococcus pneumoniae, Freponema palladium and Chlamydia trachomatis. The antibacterial compound may be used as a food grain seuplement in livestock and poultry food composition. Note: The present sequence is not shown in the specification but has been accessed from Genbank using the appropriate accession number given in the specification. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents a gene coding Chlamydia 16s ribosome RNA from Chlamydia trachomatis. Also described in the present invention are: (1) a recombinant vector containing the above gene; and (2) a transformant transformed by the above recombinant vector. The nucleic acid, and primers which can hybridise to it, are used for the specific nucleic acid amplification detection of a Chlamydia genus microbe i.e.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Chlamydia species ribosome genes, and primers derived from it - used for the nucleic acid amplification detection of Chlamydia species.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Chlamydia genus; microbe; bird-hosted; 16S ribosome RNA; detection; ds.

/close lib="formuse pinseter xylem"
/note="Compression wood was induced in four 14-year old
maritime pine clones by artifitial bending. Control clone
(no bending) were sampled for xylem associated with early
wood and late wood at the beginning (April) and at the end
(August) of the growing seasons. Differentiating xylem
corresponding to Early wood, late wood, compression wood
and opposite wood were used for mRNA fingerprinting using
the cDNA-APIPP assay."

polylinker; Site 1: Not 1; Site 2: Bco RI; The UI-R-CSO
library is a normalized library constructed from the
following rat heart tissues: embryonic day 17, embryonic
day 19, embryonic day 21, adult day 1, adult day 12, adult
day 75, adult day 200. For a detailed description of the
library from which this clone was derived, please visit
our web site at ratest.eng.ulowa.edu. The subtraction has
been previously described in (Bonaldo, Lennon and Soares,
Genome Research 6:791-806, 1996)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence Description of the sequence of the sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence Sequence S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
